

There are so many benefits to **advanced meters**, from enabling energy-saving choices to improving how the utility balances the demands on the system.

### Receive Energy Alerts

Get outage notifications and bill reminders on your mobile device. You can manage your account from anywhere. We are committed to making your customer experience more convenient.

### Information at Your Fingertips

Once the system is fully implemented you will be able to go online to see a detailed history of your energy usage and costs allowing you to compare your usage and make changes to reduce your bill.

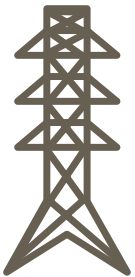

### Reduce Your Bill

Advanced meters provide customers with tools to see exactly how you are using energy so you can make informed decisions that help you reduce your monthly bill.

### Control Your Energy Usage

The PUD will receive meter reads over a secure wireless network meaning reduced errors from manual meter reading. You'll have daily usage information available at your fingertips.

### More Reliable Service

The grid modernization project provides the utility with two way communication between PUD 3 and the system allowing us to quickly identify outages and resolve other service problems.

### Better For the Environment

Eliminating the need for meter-readers to drive thousands of miles annually to read your meter each month. This will reduce the utility's carbon footprint which already has a 97% carbon free fuel mix.
