

PUD 3 OUTAGE MAP

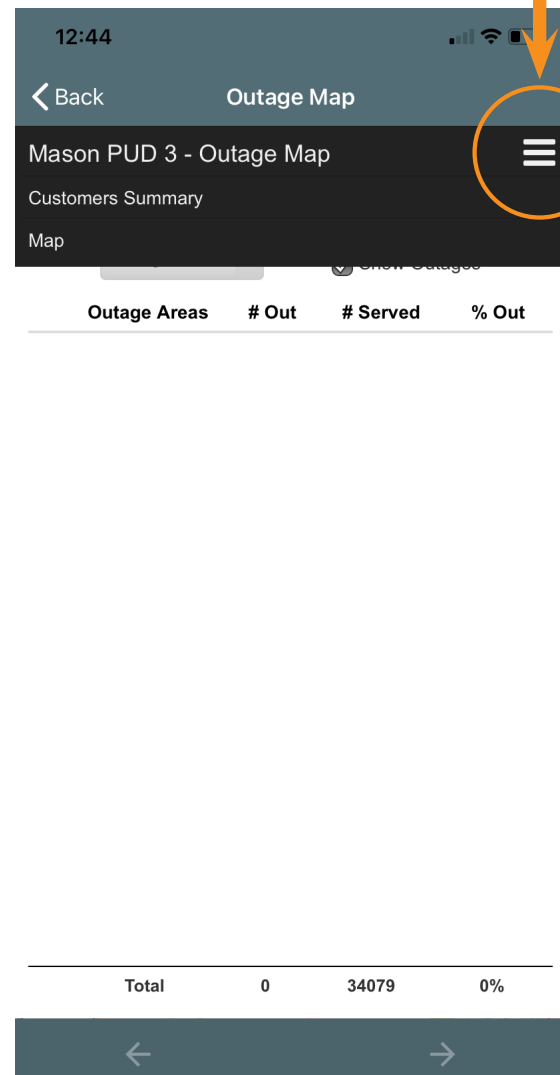

A step-by-step guide

The PUD 3 Outage Map provides a view of the outages within our service territory. You can see how many outages are currently reported and view details about outages such as the cause, start time, number of customers affected, and the estimated time of restoration. Locations are prioritized to get the largest number of customers back in service. The map automatically updates as power is restored.

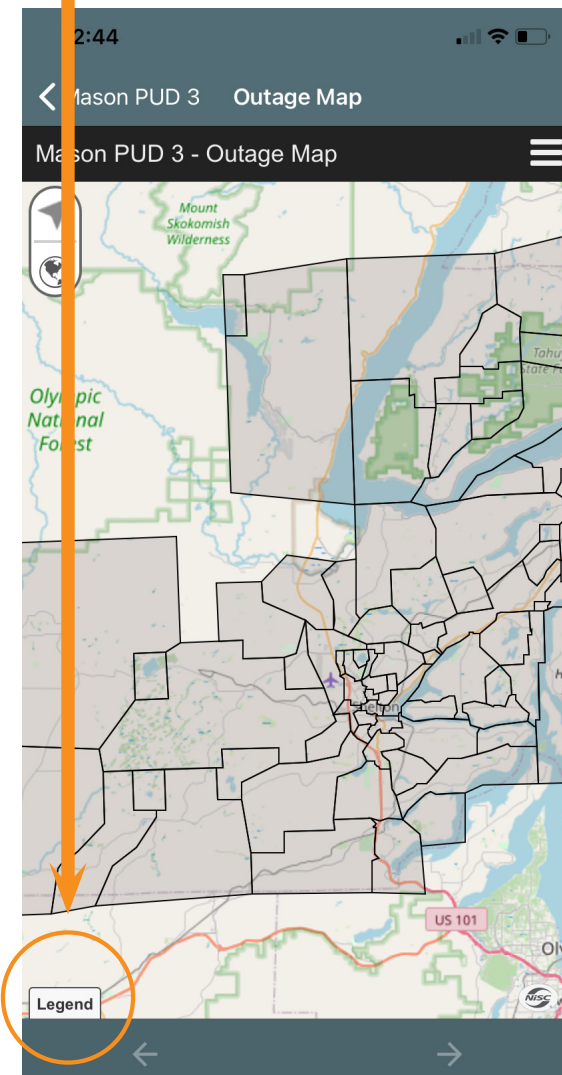

From the home screen, select the Outage Map icon

The menu icon allows you to toggle between the "Customers Summary" and "Map" view.

From Map view, select "Legend" to view the Map Key (shaded area on map shows the PUD 3 service territory).

The colored circles on the Map Key indicate where the largest outages are occurring within the PUD 3 service territory.
